Career Analysis Report

AI-Powered Skills Gap Analysis & Learning Roadmap

Candidate Profile

Name: Jason Miller

Current Title: Professional

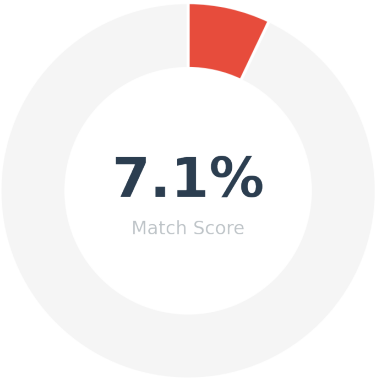
Total Skills: 3

Target Role

Position: Senior Machine Learning Engineer

Company: TechVision AI

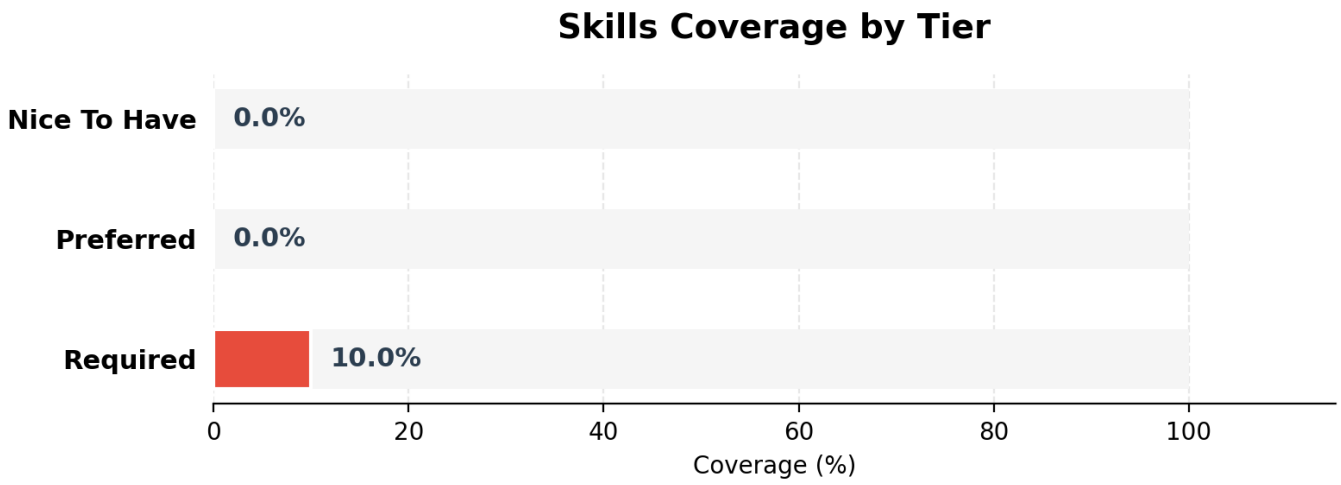
Overall Match Score

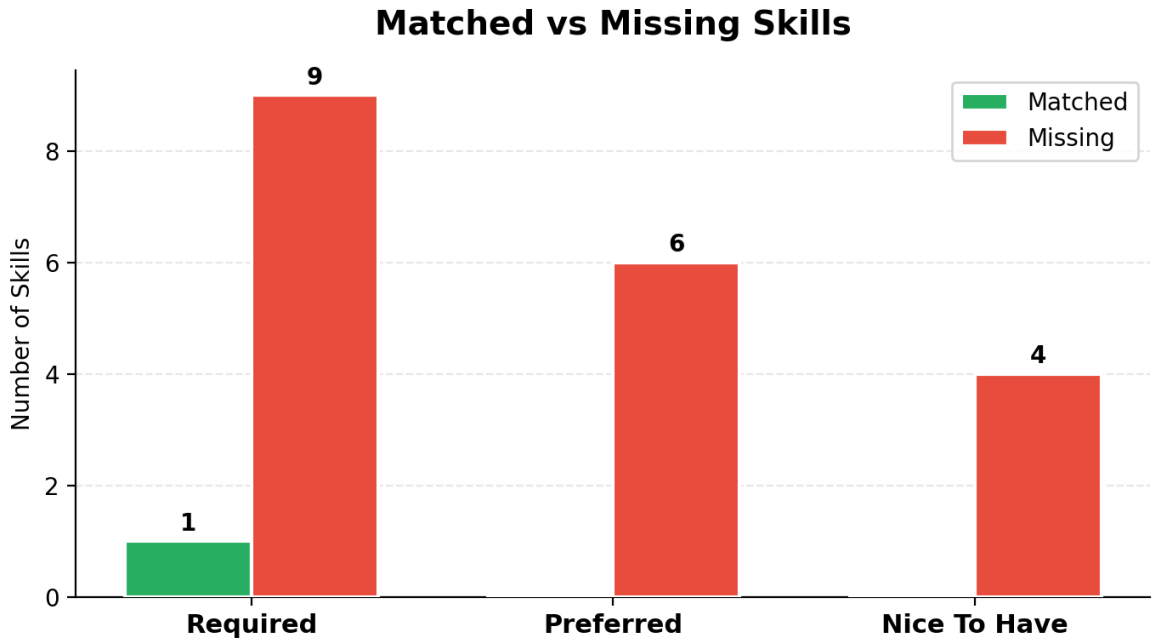


Generated on March 02, 2026 at 02:00

Skills Match Breakdown

Overall match score: 7.1%. Below is the detailed breakdown by skill tier.





[+] Matched Skills

Required:

[+] Deep Learning

[-] Missing Skills (Gap)

Required:

[-] Ci/Cd Pipelines

[-] Docker

[-] Kubernetes

[-] Machine Learning
[-] Mlflow
[-] Python
[-] Pytorch
[-] Rest Apis
[-] Sql

Preferred:

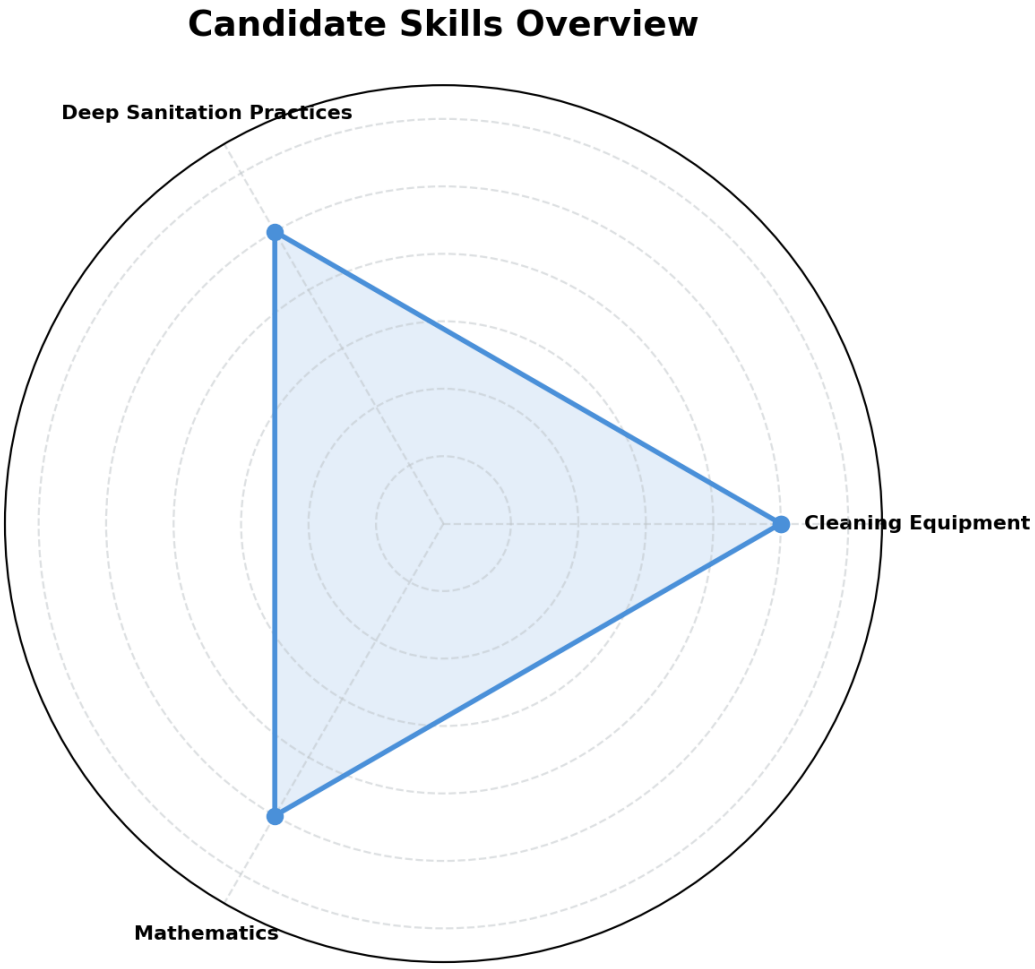
[-] Apache Spark
[-] Aws (Sagemaker, Lambda, S3)
[-] Data Analysis
[-] Llm Fine-Tuning
[-] Tensorflow
[-] Terraform

Nice To Have:

[-] Go
[-] Graph Neural Networks
[-] Rust
[-] Team Management

Candidate Skills Overview

Jason Miller has 3 identified skills across technical, tools, and soft skills categories.



Complete Skills Inventory

* Cleaning Equipment
* Deep Sanitation Practices
* Mathematics

30-Day Learning Roadmap

Gap Analysis Summary

* Jason Miller has a strong foundation in Deep Learning, which is a significant asset for the Senior Machine Learning Engineer role at TechVision AI. However, there is a substantial skills gap, particularly in areas like CI/CD Pipelines, Docker, Kubernetes, Mlflow, Python, PyTorch, REST APIs, and SQL. These are all REQUIRED skills for the role. Additionally, Jason should consider developing skills in Apache Spark, AWS services, Data Analysis, LLM Fine-Tuning, TensorFlow, and Terraform to enhance his candidacy. While skills in Go, Graph Neural Networks, Rust, and Team Management are nice to have, they are not critical for the immediate role.

30-Day Learning Roadmap

Week 1: Foundational Skills

* Day 1-2: Python Basics and Advanced Concepts - Complete Python tutorials on Codecademy or freeCodeCamp. Focus on data structures, algorithms, and libraries like NumPy and Pandas.

* Day 3-5: SQL Fundamentals - Use SQLZoo or Khan Academy to learn SQL basics. Practice querying databases and writing complex queries.

* Day 6-7: REST APIs - Learn about RESTful APIs using resources like REST API Tutorial or MDN Web Docs. Build a simple API using Flask or FastAPI.

Week 2: Containerization and Orchestration

* Day 8-10: Docker Basics and Advanced Usage - Follow Docker's official documentation and tutorials on Docker Hub. Learn to containerize applications and manage Docker images.

* Day 11-14: Kubernetes Fundamentals - Use Kubernetes official documentation and courses on Udemy or Coursera. Learn to deploy, scale, and manage containerized applications.

* Day 15-16: CI/CD Pipelines - Explore CI/CD concepts using Jenkins, GitHub Actions, or GitLab CI. Set up a simple CI/CD pipeline for a sample project.

Week 3: Machine Learning and MLOps

* Day 17-19: Machine Learning with Python - Use resources like Coursera's Machine Learning course by Andrew Ng or Fast.ai. Focus on implementing ML models in Python.

* Day 20-23: PyTorch and TensorFlow - Learn PyTorch through the official PyTorch tutorials and TensorFlow through TensorFlow's official documentation. Implement a simple neural network in both frameworks.

* Day 24-25: MLOps with MLflow - Use MLflow's official documentation and tutorials to learn about tracking experiments, packaging models, and deploying models.

Week 4: Cloud and Advanced Topics

* Day 26-28: AWS Services (SageMaker, Lambda, S3) - Use AWS's free tier and tutorials to learn about SageMaker, Lambda, and S3. Deploy a simple ML model using SageMaker.

* Day 29-30: Terraform and Data Analysis - Learn Terraform basics through HashiCorp's official documentation. Use resources like Kaggle or DataCamp to practice data analysis.

Milestones & Success Metrics

* End of Week 1: Jason can write Python scripts, query databases using SQL, and build a simple REST API.
* End of Week 2: Jason can containerize applications using Docker and deploy them using Kubernetes. He also sets up a basic CI/CD pipeline.
* End of Week 3: Jason can implement machine learning models using PyTorch and TensorFlow and track experiments using MLflow.
* End of Week 4: Jason can deploy ML models using AWS SageMaker and manage infrastructure using Terraform. He also practices data analysis techniques.

Recommended Resources

* Python: Codecademy, freeCodeCamp, Python Official Documentation
* SQL: SQLZoo, Khan Academy, W3Schools
* REST APIs: REST API Tutorial, MDN Web Docs
* Docker: Docker Official Documentation, Docker Hub
* Kubernetes: Kubernetes Official Documentation, Udemy, Coursera
* CI/CD Pipelines: Jenkins, GitHub Actions, GitLab CI
* Machine Learning: Coursera (Andrew Ng), Fast.ai
* PyTorch: PyTorch Official Tutorials
* TensorFlow: TensorFlow Official Documentation
* MLflow: MLflow Official Documentation
* AWS Services: AWS Free Tier, AWS Documentation
* Terraform: HashiCorp Official Documentation
* Data Analysis: Kaggle, DataCamp

Daily Time Commitment

* Suggested Hours per Day: 4-6 hours
* Optimal Schedule: Morning (2-3 hours) and Evening (2-3 hours) with breaks in between. This schedule allows for focused learning sessions while also providing time for rest and practical application.
